Deloitte Recruiting Team

AI & Engineering – Engineering as a Service

Re: Software Engineer II – Microservices Java with Node JS (Requisition #350332)

Dear Hiring Manager,

I'm writing to apply for the Software Engineer II role on the Engineering as a Service team. I bring 4+ years of hands-on backend engineering experience building RESTful APIs and microservices with Node.js, Express.js, and NestJS, delivering production systems that handle 50,000+ daily requests at 99.5% uptime for enterprise CRM, cloud telephony, and analytics platforms — the same kind of scalable, service-oriented engineering this role is built around.

In my current role at Triotech Bizserve, I designed a multi-tenant microservice architecture for Ringingo, a cloud telephony SaaS platform, including a RabbitMQ-driven event pipeline with retry/delivery-log mechanisms and JWT-based API key management. Previously at Zuqo Corporation, I reduced MongoDB query latency by 35% through indexing and connection pooling, cut asynchronous job processing time from 8 seconds to under 2 seconds by redesigning queue consumers, and standardized data-consistency patterns across MongoDB and MySQL microservices — reducing inter-service inconsistencies by 60%. I've also implemented JWT and OAuth 2.0 authentication flows, field-level encryption, and RBAC for HIPAA-aligned systems, and resolved 30+ production incidents while cutting Mean Time to Resolution by roughly 45%.

My core strength is Node.js and distributed backend systems; my Java background is at the working-knowledge level from academic coursework rather than production delivery. What I bring directly to this role is the same underlying discipline the position calls for: object-oriented design, clean and maintainable service architecture, secure API design, database performance tuning, and full ownership of the development lifecycle from code review through production support. My QA automation background with Selenium, Postman, and JMeter also gives me an end-to-end perspective on release quality that complements the team's CI/CD practices.

I've worked directly with clients and cross-functional teams in Agile sprints throughout my career, consistently clarifying requirements, reducing ambiguity, and delivering features on schedule. I'd welcome the opportunity to bring that same ownership and collaborative approach to Deloitte's Engineering as a Service team, and I'm glad to discuss how my Node.js and microservices experience can contribute to the team's goals, alongside my openness to deepening my Java and Spring Boot skills on the job.

Thank you for your time and consideration. I look forward to the opportunity to speak further.

Sincerely,

Dilipkumar Nehru
